

OLESEN | SSL REEL LITE™

THE LED REPLACEMENT FOR THE TRADITIONAL 6K SPACE LIGHT

Solid State Lighting Taken to the Next Level

The Reel Lite™ from Olesen SSL is a perfect replacement for a 6k space light, delivering high output, solid color temperature, and soft light quality using a fraction of the energy of the traditional source. It has been carefully designed to work directly with existing accessories, targets and skirts, and is stackable for simple storage solutions.

The Reel Lite™ provides significant advantages over the incandescent space light as well as other solid state LED versions. The simplicity of the design allows for immediate replacement of existing lights without training, using Powercon connections that can adapt to any existing set up including Socapex, Bates, or Edison. The Powercon connection also allows the power to run from one Reel Lite™ to another, eliminating extra cable runs. The extreme long life of the unit increases safety as well as time and labor, allowing you to 'set and forget.' DMX dimming allows for seamless control, with no color shift through output variance. Wireless DMX is also available.

manufactured in the USA

Photometrics

Color Temperature: 3200k
Connections: DMX and optional wireless DMX for control and dimming
Power Rating: 90-230V
Power Draw: 5 amps
